Result

The result of another transaction command.

```
type Result {
  cmd: Int!
  ix: Int
}
```

Fields

`Result.cmd.Int!` non-null scalar

The index of the previous command (0-indexed) that returned this result.

`Result.ix.Int` scalar

If the previous command returns multiple values, this is the index of the individual result among the multiple results from that command (also 0-indexed).

Implemented By

`TransactionArgument` union
