ExecutionResult

The result of an execution, including errors that occurred during said execution.

```
type ExecutionResult {
  errors: [String!]
  effects: TransactionBlockEffects!
}
```

Fields

`ExecutionResult.errors.[String!]` **list** **scalar**

The errors field captures any errors that occurred during execution

`ExecutionResult.effects.TransactionBlockEffects!` **non-null** **object**

The effects of the executed transaction. Since the transaction was just executed and not indexed yet, fields including `balance_changes`, `timestamp` and `checkpoint` are not available.

Returned By

`executeTransactionBlock` **mutation**
