

OpenMoveTypeSignature

The shape of an abstract Move Type (a type that can contain free type parameters, and can optionally be taken by reference), corresponding to the following recursive type:

```
type OpenMoveTypeSignature = { ref: ("&" | "&mut")?, body: OpenMoveTypeSignatureBody, }
```

```
type OpenMoveTypeSignatureBody = "address" | "bool" | "u8" | "u16" | ... | "u256" | { vector:  
  OpenMoveTypeSignatureBody } | { datatype { package: string, module: string, type: string,  
  typeParameters: [OpenMoveTypeSignatureBody] } } | { typeParameter: number }
```

```
scalar OpenMoveTypeSignature
```
