

AuthenticatorStateUpdateTransaction

System transaction for updating the on-chain state used by zkLogin.

```
type AuthenticatorStateUpdateTransaction {  
  epoch: Epoch  
  round: UInt53!  
  newActiveJwks(  
    first: Int  
    after: String  
    last: Int  
    before: String  
  ): ActiveJwkConnection!  
  authenticatorObjInitialSharedVersion: UInt53!  
}
```

Fields

`AuthenticatorStateUpdateTransaction.epoch` • Epoch • object

Epoch of the authenticator state update transaction.

`AuthenticatorStateUpdateTransaction.round` • UInt53!

non-null scalar

Consensus round of the authenticator state update.

`AuthenticatorStateUpdateTransaction.newActiveJwks` • ActiveJwkConnection! • non-null object

Newly active JWKS (JSON Web Keys).

`AuthenticatorStateUpdateTransaction.newActiveJwks.first` • Int • scalar

`AuthenticatorStateUpdateTransaction.newActiveJwks.after` • String • scalar

`AuthenticatorStateUpdateTransaction.newActiveJwks.last` • Int • scalar

`AuthenticatorStateUpdateTransaction.newActiveJwks.before` • String • scalar

AuthenticatorStateUpdateTransaction.authenticatorObjInitialSharedVersion • UInt53! non-null scalar

The initial version of the authenticator object that it was shared at.

Implemented By

TransactionBlockKind union
