SplitCoinsTransaction

Splits off coins with denominations in `amounts` from `coin`, returning multiple results (as many as there are amounts.)

```
type SplitCoinsTransaction {
  coin: TransactionArgument!
  amounts: [TransactionArgument!]!
}
```

Fields

SplitCoinsTransaction.**coin**.TransactionArgument!

non-null **union**

The coin to split.

SplitCoinsTransaction.**amounts**.[TransactionArgument!]!

non-null **union**

The denominations to split off from the coin.

Implemented By

`ProgrammableTransaction` **union**
