# packages

The Move packages that exist in the network, optionally filtered to be strictly before `beforeCheckpoint` and/or strictly after `afterCheckpoint`.

This query returns all versions of a given user package that appear between the specified checkpoints, but only records the latest versions of system packages.

```
packages(
  first: Int
  after: String
  last: Int
  before: String
  filter: MovePackageCheckpointFilter
): MovePackageConnection!
```

## Arguments

`packages.`**`first`**`.`Int  scalar

`packages.`**`after`**`.`String  scalar

`packages.`**`last`**`.`Int  scalar

`packages.`**`before`**`.`String  scalar

`packages.`**`filter`**`.`MovePackageCheckpointFilter  input

## Type

MovePackageConnection  object
