ConsensusV2

A ConsensusV2 object is an object that is automatically versioned by the consensus protocol and allows different authentication modes based on the chosen authenticator. (Initially, only single-owner authentication is supported.)

```
type ConsensusV2 {
  startVersion: UInt53!
  authenticator: Authenticator
}
```

Fields

ConsensusV2.**startVersion**.UInt53! **non-null** **scalar**

ConsensusV2.**authenticator**.Authenticator **union**

Implemented By

ObjectOwner **union**
